## ABSTRACT

This report provides an overview of the Oklahoma School Testing Program and summarizes students' average achievement test scores from 1986 through 1993. Students were administered the Iowa Tests of Basic Skills (ITBS) in grades 3, 5, and 7; and the Tests of Achievement and Proficiency (TAP) in grades 9 and 11 in spring 1993. Test results indicate that the average student in these grades is performing at a level that is equivalent to, or slightly above, the national average in all subject levels. In addition, students tested in 1993 earned scores that are equal to, or slightly higher, than those of 1992. Fourteen tables and 11 figures in the body of the text present figures about the achievement of Oklahoma students. Nine appendixes contain an additional 355 pages of results in table form, and provide the following information for 1992: (1) state level results; (2) a summary of state results; (3) a list of averages by region for grade 3; (4) averages for grade 5; (5) averages for grade 7; (6) averages for grade 9; (7) averages for grade 11; (8) percent of scores under the normal curve; and (9) a companion document, the "Interpretive Guide--1993" published by Riverside Publishing Company. (Contains 10 references.) (SLD)

June 24, 1993

To the Citizens of Oklahoma:

This report provides an overview of the Oklahoma School Testing Program (OSTP) and summarizes students' average achievement test scores from 1986 through 1993. This program was implemented in compliance with Title 70 O.S. 1981 /1210.510 et. seq. (House Bill 1466, 1985).

Students were administered the Iowa Tests of Basic Skills (ITBS) in Grades 3, 5, and 7, and the Tests of Achievement and Proficiency (TAP) in Grades 9 and 11 during late March and early April 1993. Test results indicate that the average student enrolled in Grades 3, 5, 7, 9, and 11 is performing at a level which is equivalent to or slightly above the national average in all subject areas. In addition, the students tested in 1993 earned scores that are equal to or slightly higher than those earned by students enrolled in the same grades in 1992. These results are encouraging and are solid indicators of educational progress.

The State Department of Education, local school administrators, and classroom teachers have exerted considerable effort to use OSTP results--in conjunction with other indicators of need--to improve instructional programs during the past seven years. We commend teachers and school administrators for their diligence, hard work, and the student achievement progress they have fostered.

We appreciate the cooperation of school administrators and teachers in local management of the OSTP. In addition, we appreciate parental assistance in preparing their children mentally, physically, and emotionally for participation in this program. It is only through such a spirit of school and community cooperation that we can successfully obtain a measure of our students' best efforts and accurately reveal evidence of their accumulated knowledge and academic skills.

Sincerely,

A handwritten signature in cursive script that reads "Sandy Garrett".

Sandy Garrett  
State Superintendent  
Secretary of Education

# OKLAHOMA SCHOOL TESTING PROGRAM REPORT FOR 1993: Achievement Test Component

## EXECUTIVE SUMMARY

The Achievement Test Component of the Oklahoma School Testing Program (OSTP) focused on administration of the following tests to students in late March and early April of 1993: (These tests are components of the same achievement test series and are developed and published by the Riverside Publishing Company, the state's contractor for 1990-1993.)

Iowa Tests of Basic Skills (ITBS)--administered at Grades 3, 5, and 7  
Tests of Achievement and Proficiency (TAP)--administered at Grades 9 and 11

The 1993 OSTP results expressed in National Percentile Ranks (NPR) are displayed in Table 1 on *page v*. An NPR of 50 represents the "national average"--or the average of scores resulting from the national norming of the tests. Therefore, a statewide average score of 56, for example, means that the average Oklahoma student in that particular grade scored at a level that is **equivalent to--or better than--56%** of the students who comprised the national norm group utilized to establish norms for the test.

The Oklahoma achievement test results for 1993 indicate the following:

- ITBS and TAP Total Composite scores earned by Oklahoma's students enrolled in Grades 3, 5, and 11 in 1992-93 were generally higher than those earned by students enrolled in these grades in 1991-92. The Total Composite scores for Grades 7 and 9 remained the same.
- The 1993 test scores indicate that Oklahoma students, on the average, are performing at levels equal to or slightly above the national average of the 50th Percentile Rank in all major subject and/or skill areas.
- The major skill strengths at the grade levels tested appear to be the following:

| <u>Grade 3</u> | <u>Grade 5</u> | <u>Grade 7</u> | <u>Grade 9</u> | <u>Grade 11</u>    |
|----------------|----------------|----------------|----------------|--------------------|
| Language       | Science        | Science        | Science        | Science            |
| Science        | Language       | Work/Study     | Social Studies | Social Studies     |
| Mathematics    | Reading        | Reading        | Reading        | Written Expression |
|                | Comprehension  | Comprehension  | Comprehension  |                    |

Table 2 on *page vii* summarizes the ITBS and TAP Normal Curve Equivalent (NCE) scores\* of students in Grades 5, 7, 9, and 11 (a) in 1990, and (b) in 1991. Displayed in juxtaposition to these scores are the ITBS and TAP NCE scores earned by the same groups of students when they were in Grades 5, 7, 9, and 11, respectively. The groups of students highlighted in this comparison *are not comprised of exactly the same students* from one data-gathering point to the other. However, it is most likely that a sufficient percent of the 35,000 to 45,000 students per grade were enrolled in Oklahoma schools during the targeted periods (i.e., 1990 to 1992 and 1991 to 1993) to justify this comparison.

\*NCE scores are based on an equal interval scale from 1 to 99, with the average being 50. Zero differences in scores from one year to another (i.e., no difference) represent *normal progress* for individuals or groups.

**Key to Symbols used:**

**Iowa Tests of Basic Skills (ITBS)**

- \* Total number of students tested.
- \*\* The average of Reading, Mathematics, and Language subtest scores.
- \*\*\* The average of all subtests administered.

**Tests of Achievement and Proficiency (TAP)**

- † Total number of students tested
- †† Same as "Language Skills" on the ITBS.
- ††† Reference Skills, or the same as Total Work-Study Skills for the ITBS.
- †††† The average of Reading Comprehension, Mathematics, and Written Expression subtest scores.
- ††††† The average of all subtests administered.

Table 2

A Comparison of **ITBS** and **TAP** Normal Curve Equivalent Scores Earned by Students in Grades 3, 5, 7, and 9 in 1990 and 1991 with their Respective Scores in Grades 5, 7, 9, and 11

\*Net Diff. indicates the difference in average scores for each group for the years identified.

\*\*Using Sources of Information measures skills equivalent to those measured in Total Work/Study Skills.

NCE score differences in performance over each of the two-year periods identified indicate consistency in gains and/or losses. That is, the direction of the net difference (either + or -) is the same for both groups in the same subject/skill areas measured. In addition, great similarities of degree of the difference scores are found when the two-year progress of the groups is compared. Progress in Reading Comprehension, Work/Study Skills, and Mathematics appears to be erratic as students move through the grades. In addition, progress in Science and Social Studies appears to be consistent until students reach high school. Differences in course offerings may account for part of the variance in progress patterns.

## Achievement Test Component

1993 Summary Report

**Iowa Tests of  
Basic Skills (ITBS)**  
For grades 3, 5, and 7

**Tests of Achievement  
and Proficiency (TAP)**  
For grades 9 and 11

Zoe E. Leimgruebler, Ph.D.  
Director  
Student Assessment

Sandy Garrett  
State Superintendent of Public Instruction  
OKLAHOMA STATE DEPARTMENT OF EDUCATION

# SUMMARY REPORT FOR THE OKLAHOMA SCHOOL TESTING PROGRAM Achievement Test Component--1993

## I. Introduction

The Oklahoma School Testing Program (OSTP) has focused on the administration of standardized, norm-referenced achievement tests to measure the reading, mathematics, language arts, science, and social studies skills of public school students in grades 3, 7, and 10 statewide (1986-89) and in Grades 3, 5, 7, 9, and 11 (1990-1993). The purpose of this program is to provide student test data which, when combined with other pertinent information, will serve to evaluate the effectiveness of Oklahoma's public schools.

Implemented in the school year 1985-86, the OSTP functions to improve instructional programs in all of Oklahoma's school districts. To "ensure that test data is used to prescribe skill reinforcement and remediation" (House Bills 1466 and 1110, and Senate Bills 426 and 183), the State Department of Education (1) has provided ongoing pretest and posttest inservice training for school administrators and for those who administer the achievement tests, and (2) has required each school district to develop and implement a specific program of improvement based on the test results. While the Department recognizes that change takes time and concentrated effort, we believe that the desired improvements have already begun to "take root," and that evidence of such progress will surface in the years to come.

The following report documents the successful completion of the OSTP's seventh year. It is our purpose to provide a brief historical perspective on student testing in Oklahoma, implementation procedures used in the OSTP, a description of the tests and reporting procedures used, the 1993 district level data, and state level results from 1986 through 1993.

In viewing these data, it is requested that the reader refrain from judging school districts and/or the state's educational program based on a single administration of tests. The rationale for this statement is based on the following facts:

- Tests such as the Metropolitan Achievement Test, 6th Edition (MAT-6)--administered in 1986-89 at Grades 3, 7, and 10--and the Iowa Tests of Basic Skills (ITBS, Grades 3, 5, and 7) and Tests of Achievement and Proficiency (TAP, Grades 9 and 11)--administered during 1990 through 1993--measure students' accumulated knowledge and skills. Such instruments are standardized, norm-referenced tests designed to take a "picture" of student performance at one point in time for comparison of individual and group results with those of students comprising the national norm group.

- Standardized, norm-referenced tests such as those administered to Oklahoma's students were designed by test publishers to be utilized nationwide. The learning objectives measured by such tests are obtained from results of frequency studies conducted on (1) a number of states' learner outcomes and (2) objectives on which [nationwide] state-adopted textbooks in each subject/skill area are written. The most frequently occurring objectives among these lists become the objectives measured by the tests. Although the ITBS and TAP demonstrate a degree of measurement of Oklahoma's Suggested Learner Outcomes (see Appendix A), these tests were not designed solely to measure our state's specific set of learning objectives.

#### A. Historical Perspective on Student Testing in Oklahoma

During the past several decades, norm-referenced achievement tests have been administered as locally funded/regulated programs in most of Oklahoma's public school districts. Therefore, at the local level, school administrators have had data available with which to (1) compare the achievement levels of their students with that of a national "norm" or average; and (2) determine, on the basis of broadly defined basic skills, which areas needed attention and improvement. Until the decade of the 1970's, accurate, comparable data were not available at the state level in Oklahoma.

Since 1976, the State Department of Education has conducted several studies to gather statewide data on basic skills test performance of Oklahoma's school students. Each is briefly described as follows:

- Local district achievement test data from 1970 (Grades 4, 8, and 11) and 1974 (Grades 3, 6, 9, and 12) were gathered, analyzed, and reported to the Legislature in 1976. Statewide averages of test scores indicated that Oklahoma's public school students were achieving at levels above the national norm.
- Studies were conducted in school years 1977-78 and 1978-79 to determine the status of students' skills in reading (California Achievement Test, CTB/McGraw-Hill--Grades 3, 6, 9; Senior High Assessment of Reading Performance, CTB/McGraw-Hill--Grade 12) and mathematics (California Achievement Test--Grades 3, 6, and 9.) Using results of tests administered to random samples from throughout Oklahoma, it was determined that our students were performing at levels above the national norm.

The following section describes the legislation which mandated the implementation and maintenance of the Achievement Test Component of the OSTP. Inception, implementation, and results of the Writing Assessment Component of the OSTP are described in a separate report which is currently available from the State Department of Education.

B. Inception and Continuation of the OSTP: Legislation (1984-1990)

- Oklahoma House Bill 1480 (1984) required the State Department of Education (SDE) to submit a plan for statewide assessment of students' achievement in the basic skills as specified in Section 11-103 of Title 70 of the Oklahoma Statutes. This plan described three testing options (objectives-based norm-referenced tests; standardized, norm-referenced tests; and criterion-referenced tests), met the specifications of issues to be addressed, and was submitted on January 1, 1985.
- Oklahoma House Bill 1466 (1985) mandated the implementation of the OSTP during the 1985-86 school year. This program was continued according to the Legislative mandate described in Senate Bill 426 (1986):

*SECTION 42. AMENDATORY Section 7, Chapter 329, O.S.L. 1985 (70 O.S. Supp. 1985, Section 1210.508), is amended to read as follows:*

*Section 1210.508 Beginning with the 1985-86 school year, the Board shall cause a norm-referenced test to be administered to every student enrolled in grades three, seven, and ten of the public schools of the state. Children who have individualized education plans pursuant to Public Law 101-476 shall not be required to participate in the Oklahoma School Testing Program Act.\* The test used shall be selected by the Board and shall measure specific skills represented by learner objectives. The student skills to be tested at the specified grade levels shall include reading, mathematics, language arts, communications, science and the principles of citizenship in the United States and other countries through the study of the ideals, history and government of the United States and other countries of the world, and through the study of the principles of democracy as they apply in the lives of citizens. The Board shall seek to ensure that data yielded from the test is utilized at the school district level to prescribe skill reinforcement and/or remediation by requiring school districts to develop and implement a specific program of improvement based on the test results.*

- \* NOTE: The legislation cited above continued to exempt students who have Individualized Education Plans from taking the tests. However, due to the effects of Federal Law (Section 504 of the Rehabilitation Act of 1973, 29 U.S.C. 706, regarding the prevention of discrimination against the handicapped), the SDE issued the following message to all public school superintendents to clarify the procedure to be used with these students:

*"Based on Oklahoma Law, students who have Individualized Education Plans (IEP) pursuant to Public Law 101-476 shall not be required to participate in the Oklahoma School Testing Program. However, the right of these students to participate in the OSTP cannot*

be denied. Parents must be given the opportunity to sign a form indicating their desire to have their children take the tests. The form to be used is the 'IEP Program SDE Form 9' which is employed during the IEP Conference with parents. Please make sure that parents respond to the question on this form regarding their children's participation in the OSTP."

- Oklahoma House Bill 1110 (1987) provided funding to continue administering the achievement test at Grades 3, 7, and 10. In addition, funds were provided to expand the writing assessment component to include Grades 7 and 10 in 1988 and 1989.
- Senate Bill 183 and House Bill 1017 (enacted in 1989 and 1990, respectively) served to perpetuate the OSTP with two basic changes: (1) the grade levels at which the achievement tests were to be administered were expanded from 3, 7, and 10 to 3, 5, 7, 9, and 11; and (2) the exemption of students who have IEP's was addressed in the following manner:

*"A student whose education is subject to the provisions of an individualized education plan (IEP) pursuant to Public Law 101-476, as amended, shall be tested pursuant to the provisions of the Oklahoma School Testing Program Act, Section 1210.505 et seq. of this title, only to the extent specified by the student's individualized education plan."*

With this change, the decision to test such students became a function of the IEP Team, of which the student's parent is a standing member. The "IEP Program SDE Form 9" continued to be utilized as the documentation of the team's decision in regard to whether or not the student would be administered the tests.

Regulations were adopted by the State Board of Education in 1987, 1989, and 1990 to specify test exemptions for both the students who have IEP's and those who are considered as Limited English Proficient (LEP) based on the definition issued by the U.S. Secretary of Education. (These regulations are summarized on pages 8 and 9 of this report.) According to Regulation, students who are considered as LEP can be exempted from OSTP participation at local district option (1) if such students meet the definition; (2) if these students have been counted as LEP for accreditation reporting purposes at the time that tests are administered; and (3) if parental permission for exemption from testing is obtained in writing and on file in the school.

Current legislation implies continued maintenance of the OSTP. Since this program focuses on use of standardized tests, it is of benefit to view such instruments and their use in a realistic manner. The following section defines standardized tests as a category and discusses certain benefits and cautions to be considered in their use.

### C. Use of Standardized Tests: Benefits and Cautions

A standardized test is one which has been constructed in accord with detailed specifications--one for which the items have been selected after tryout for appropriateness in difficulty and discriminating power. It is accompanied by a manual giving definite directions for uniform administration and scoring, and one which is provided with relevant and dependable norms for score interpretation (Ebel and Frisbie, 1986). Such tests provide data which indicate relative rankings among students based on their performance. Such rankings yield comparisons of individuals' scores (as well as average scores for groups) with their peers at the class, grade, building, district, state, and national levels.

#### 1. Administration of standardized tests include the following positive factors:

- As stated in A Nation at Risk: The Imperative for Educational Reform (National Commission on Excellence in Education, 1983) "Standardized tests of achievement (not to be confused with aptitude tests) should be administered at major transition points from one level of schooling to another and particularly from high school to college or work. The purposes of these tests would be to: (a) certify the student's credentials; (b) identify the need for remedial intervention; and (c) identify the opportunity for advanced or accelerated work. The tests should be administered as part of a nationwide (but not Federal) system of State and local standardized tests."
- Currently, approximately 35 of the 50 American states conduct statewide assessment to determine students' achievement levels in the basic skills. (Survey Conducted by the Council of Chief State School Officers, 1991). Fifty-seven percent (57%) of these states employ standardized tests to assist in determining the achievement progress of students in the public schools. Such information is useful "because it helps to inform students, teachers, administrators, and the public at large of the educational efforts in their schools" (Ebel and Frisbie, 1986).
- Linn (1983), in differentiating between the function of teacher-made tests and standardized achievement tests, stated "for the school or district as a whole, the traditional standardized test provides a general summary of the achievement of its students. By themselves, the scores do not reveal anything about the causes of performance, but they do provide a general reading of the current status in comparison to the nation at large. By comparison of scores from one year to another, the school or district can also get an indication of improvement or decline in performance."
- Through the use of computers for scanning and scoring, reports of test results can be customized to yield desired data on a variety of skill categories. To accomplish this, test item data from any of the subject

area subtests can be pooled to yield results on such categories as research skills, higher order thinking skills, and any specific learner objectives which were measured by the tests. The availability of such specific information increases a school's potential for helping students improve in their acquisition of basic skills.

- The results of standardized tests can be used to determine the apparent effectiveness of specific instructional programs and efforts exerted toward educational reform. Considered most appropriate is the observation of individual student progress over a span of several years. The analysis and use of such data in decision-making can aid in increasing the cost efficiency of our schools.
  - The benefit to students resulting from taking a standardized test can be enhanced if they and their parents are given feedback on test results. In addition, such sharing of results (as is the goal in the OSTP) can encourage students to take responsibility for much of their own skill reinforcement and learning--a factor which greatly enhances their potential for improvement.
  - To enter many professions, students will be expected to pass tests. Test-taking in itself involves a set of skills which can be sharpened and improved with practice. The annual administration of standardized tests serves to prepare students for taking college entrance tests as well as examinations to qualify in such fields as real estate, accounting, plumbing, electrical work, law, medicine, and others.
2. There are certain cautions which should be noted in the administration of standardized tests and the interpretation and use of such data:
- Standardized, norm-referenced achievement test batteries are designed to be used nationwide. Since there is no established "nationwide curriculum," it is highly unlikely that the objectives on which a given standardized test is developed will exactly fit the curriculum of any specific school, district, or state. This lack of correlation can often result in lower student performance than that which would be obtained from the administration of a teacher-made test which is tailored to the course and objectives being taught.

NOTE: Performance of the national norm group would be affected similarly from this condition (since this group represents a random sampling of students from all sizes and conditions of school districts across the nation). Therefore, the national norm with which local student performance is compared on each subtest would reflect similar effects--a factor which should not penalize students in school districts which can offer a varied curriculum.

- Failure to control certain necessary standardized test conditions can yield invalid results. Necessary conditions to control during test administration include (a) physical environment (room temperature, lighting, noise level, and overcrowding of students); (b) emotional environment (diminishing test anxiety and motivating students through positive attitudes on the part of parents, teachers, and school administrators); and (c) test administration procedures (giving directions accurately, observing strict timing of tests, and monitoring students' test-taking behaviors). Appropriate precautions regarding the control of all conditions mentioned above are discussed in the Pre-test Inservice Manual which was provided for all test administrators who attended inservice prior to testing.
- Standardized test results represent estimates of student achievement levels only at the time the test was given and for a period of a few weeks. Students' test scores can change to a measurable degree with the passage of time, accumulation of additional knowledge, and improvement in basic skills. Therefore, neither individual students, school buildings, nor entire school districts should be permanently labeled or judged based on the single administration of a standardized test.
- It is neither equitable, meaningful, nor appropriate to compare the performance of individual schools or school districts with one another without considering certain demographic factors which are known to exert influence on test results (Jenks, 1972; White, 1976). These factors include socioeconomic level of the community, median income, and median educational levels of community members. In addition, where small numbers of children are tested, the abilities of one or two students can affect the overall percentile ranking of any grade level in that district. Furthermore, the mobility of families can have an effect on the overall percentile ranking of the school district.

In general, the higher the socioeconomic level of the community is, the greater the median income; and the higher the median educational level of the community is, the more likely the students in that school district are to score higher on achievement tests. The Educational Indicators Studies developed by the State Department of Education (1989-1993) provide analyses of district-level test scores based on statistical weightings of relevant socioeconomic, demographic, and [school-related] financial factors. For these studies, schools were ranked at each grade level tested based on the differences in actual scores earned and scores that were predicted from appropriate weightings of factors from among the following which were found to correlate to a moderate degree with test score levels: (1) percent of total school funding represented by a combination of county and local funds; (2) average salary of teachers; (3) percent of total population applying for free and/or reduced school

lunches; and (4) percent of students from racial/ethnic minorities. Due to efforts to report the 1993 test results as quickly as possible after their receipt, the test data contained in this report could not be treated statistically to equalize the effects of those factors listed above. Under these conditions, it is both meaningless and inappropriate to compare the performance of students in specific schools or school districts to determine the effects of instructional programs.

## II. Implementation and Maintenance Procedures Used in the OSTP: 1985-93

### A. Program Objectives

- To obtain a test which would meet the specifications outlined in Oklahoma Law.
- To provide a system whereby tests would remain secure.
- To provide inservice for all test administrators as outlined in the law.
- To provide a system for dissemination and return of test materials.
- To accomplish a valid administration of the tests.
- To provide a system for scanning answer documents, scoring, and reporting results to local schools.
- To analyze, interpret, and report statewide results to the State Board of Education, the Legislature, and the general public.
- To provide follow-up inservice on the interpretation and use of test results at the local school level.
- To aid school district personnel in incorporating the use of test scores in their School Improvement Plans submitted annually to the SDE.

### B. Obtaining An Achievement Test Series for OSTP Use

- In compliance with Oklahoma Law, a Request for Proposals (RFP) was developed and released to test publishers nationwide (July 1989). This document described the purpose and function of the OSTP and specified program needs related to products, services, and time lines. In addition, the RFP delineated procedures for certification, submitting cost information, and preparation for the review process (i.e., information to be submitted; criteria on which products and services would be judged; and the process which the State Department of Education would use to evaluate bids and submit recommendations to the State Board.

- A "mandatory attendance" Pre-Bid Conference was subsequently held for all interested bidders. All bidders' questions received prior to this conference and the Department's responses were submitted in writing to bidders. All requirements of the OSTP were discussed and bidders were allowed to clarify any misconceptions regarding bid requirements.
- The two bids submitted were reviewed by approximately 75 educators who were chosen for their knowledge of students' needs at Grades 3, 5, 7, 9, and 11 in combination with expertise in curriculum and/or testing. Reviewers included classroom teachers, school administrators, counselors, college professors, and vocational education teachers.

Two geographically and ethnically balanced committees were formed to perform the necessary evaluative functions--review for curricular validity and review for technical substantiality. Each committee met for two days, studied all materials, and completed evaluation forms containing more than 90 criteria on which to judge each of the proposals and test materials submitted.

- Responses on the evaluation forms were summarized to obtain a recommendation. The State Board of Education adopted the Iowa Test of Basic Skills (ITBS) for Grades 3, 5, and 7 and the Tests of Achievement and Proficiency (TAP) for Grades 9 and 11. Both tests are published by the Riverside Publishing Company (1989). These tests are described in the companion document, *Interpretive Guide--1993*. (Appendix I)

By Oklahoma law, state agencies are allowed to purchase the products and services of a given company with one-year contracts for up to five consecutive years. In 1986, the State Department of Education, through utilizing the state bid procedure described above, contracted with The Psychological Corporation to administer the Metropolitan Achievement Tests, 6th Edition (MAT-6). The statutory change represented by expansion of the grade levels to be tested from 3, 7, and 10 to 3, 5, 7, 9, and 11 (Senate Bill 183) necessitated the rebidding of the OSTP in 1989.

It is inappropriate to compare data from one publisher's series of tests to that of another without utilizing results of an equating study to determine the degree to which such scores are comparable. The Riverside Publishing Company conducted such a study in Oklahoma schools (January 1990) to equate the MAT-6 scores to the ITBS and TAP. The use of equated scores yielded by this study allows (1) estimates of how students would have scored had they taken the MAT-6, and (2) comparisons of the same students' performance from one year to another. Equated scores were provided for all schools during the first two years' use of the ITBS and TAP. These data allowed Chapter I reporting to be completed without having to administer additional tests.

### C. Providing Awareness and Instruction at the Local School Level

- Awareness of the program and its requirements has been accomplished through written communiques (e.g., the *Educator*, *Administrative Focus*, and special correspondence from the State Superintendent to local school superintendents and principals), and presentations conducted throughout the state.
- In compliance with Oklahoma Law, pretest inservice training is conducted each December through mid-February for all school districts. This training focuses on setting the appropriate test environment; maintaining test validity through proper administration; test security requirements and procedures; standard OSTP practices for distribution/collection of test booklets and teachers' manuals; and required procedures for packaging and shipment of answer documents and unused test materials. Invited to participate in pretest inservice sessions are school administrators, building and district test coordinators, and those teachers and/or counselors who administer the tests.

As a service to all school districts, the State Department of Education conducts posttest inservice sessions throughout each school year. These sessions focus on analysis and interpretation of the test results and application of findings to improvement in instructional programs at the individual student, class, building, and district levels. Invited to participate in posttest inservice sessions are all school personnel whose responsibility includes evaluation and improvement of instructional programs at any level. Upon request, and/or with the approval of school administrators, these sessions are individualized to specific building and/or district needs through analysis, interpretation, and utilization of the school's group-level test data during the inservice training.

Approximately 9,000 to 15,000 educators have been served annually through each of the pretest and posttest inservice program efforts. Requests for posttest inservice--honored at any time throughout the year--have steadily increased as the OSTP's fifth year reaches completion. School administrators are to be commended for their interest in teaching staff members to utilize students' test scores to improve instructional programs. Through such efforts, the legislative intent and purpose for which the OSTP exists--i.e., to improve education in the State of Oklahoma--holds greater potential for fulfillment.

### D. State Board Regulations for the OSTP

In July of 1987, 1989, and 1990, the State Board of Education adopted regulations to aid in local school management of the OSTP. These regulations specify procedures for the following:

- Assuring local school district compliance with both state and federal law as in exempting appropriate students from participation in the OSTP; and
- Maintenance of security on test materials and assurance of appropriate test administration behaviors to ensure test validity. The major security measures are summarized as follows:
  - The test form being utilized for the OSTP is embargoed by the publisher so that no person living in Oklahoma can purchase or be sampled a copy.
  - Test booklets are delivered to schools sealed individually in envelopes (Grade 3) or with paper seals (all other grades). Each test booklet to be used by a student is to be opened only by that examinee at the beginning of the test session. All tests not used by a student are to remain sealed.
  - Test booklets are "bar-coded." Distribution, retrieval, and accounting of returned booklets is done using bar-codes as the identifier.
  - Test materials are to remain locked in a secure area until the school day immediately preceding test administration and between daily administrations.
  - Tests are not to be reproduced in any form--mechanical or manual.
  - An adult monitor other than the test administrator is required to witness the test administration and securing of test materials.
  - Security forms are provided for school superintendents, principals, building and district test coordinators, test administrators, and monitors. These forms state that, to the best of the participants' knowledge, the specified test security measures were followed. All forms are to be signed by the appropriate OSTP participants and returned with answer documents. An accounting of these signed forms is documented for the State Department of Education by the test publisher.
  - All test materials are to be returned to the contracting test publisher and an accounting of said materials reported to the State Department of Education.
  - Adult participants in the OSTP are directed to refrain from overtly or covertly exposing students to the test items and/or answers to test items.
  - Violations of test security are to be reported to the State Department of Education, investigated, and proven incidents can result in such action by the Board as invalidation of the school's test scores and/or revocation of the perpetrator's teaching, counseling, or administrative certificate.

#### E. Administration of the Tests

- The tests were administered during the last two weeks in March and the first two weeks in April 1993, with a specific week for testing in a given school district being selected by the local school superintendent. Test dates were selected to assist in compliance with Chapter 1 reporting regulations and to nullify the need to "double-test" the Chapter 1 students.
- The time limits for administering each of the subtests varied from grade to grade, and were established during the norming process. Test administrators were admonished to observe these time limits strictly during the test administration process. The recommended schedules for administering the entire test battery at each of the grade levels are listed on Tables 3 and 4 (see page 13).

Table 3

**Recommended Schedule for Administering the  
IOWA TESTS OF BASIC SKILLS  
Grade 3, 5, and 7**

| Day           | Session           | TEST                                                      | Working Time                  | Actual Time | Scheduled Time |

#### F. Reporting Test Results to Schools: Methodology

In locally funded testing programs, district administrators have customized their test reports by ordering the kinds of scores which are most appropriate for interpretation and use in their own situations. The State Department of Education, in order to provide a variety of reports and kinds of scores sufficient to satisfy the needs of all Oklahoma school districts, customized the Oklahoma School Testing Program's reports to yield the scores which would be most useful in communicating with parents and conducting analyses to use for Chapter 1, gifted programs, and general improvement of instructional programs at all levels. A description of the reports with interpretations of scores is found on pages 9-37 in the companion guide to this report entitled *Interpretive Guide* (See Appendix I).

#### G. Reporting and Explaining Test Results to Parents

Distributed to each school district are two reports which assist educators in communicating with parents about their children's achievement test performance. Illustrated on page 10 of the *Interpretive Guide* (see Appendix I) is the "Pupil Profile Narrative" (or "Parent Report"). This report provides both the student's scores and an explanatory note to the parents. School administrators, by State Board Regulation, must distribute this report to parents.

The second report, "Individual Performance Profile," provides a detailed listing of the student's scores on (1) all subtests and test totals, and (2) the skill "clusters" measured within each subject area. This report can assist in explaining the student's specific skill strengths and weaknesses to parents in greater detail. (See the *Interpretive Guide*, Appendix I, page 14.)

In the 1990-91 through 1992-93 school years, the State Department of Education provided pamphlets for parents of OSTP participants. This pamphlet provides an explanation of the purpose and function of the OSTP; the test dates; suggestions for ways that parents can help prepare their children physically and emotionally for taking the tests; and methods of reporting test results to schools and parents.

### III. Description of the Tests and Definitions of Scores

The skills measured by the ITBS and TAP are outlined in the *Interpretive Guide* (see Appendix I, pages 3-4). In addition, definitions of the normative scores utilized to report students' achievement levels are provided on pages 4-8 of this guide.

#### IV. Summary of Results

##### A. Results of Document Returns

Scorable test documents for all school districts reached National Computer Service (the scanning, scoring, and reporting subcontractor) in time to be reported with state level results. Oklahoma's public schools are to be commended for the prompt return of their answer documents.

##### B. Number of Students Tested Versus Number Enrolled

Not all of the students in Grades 3, 5, 7, 9, and 11 were tested due to the following factors:

- Local school district option was offered in regard to testing students with Individual Education Plans (IEP's) pursuant to Public Law 101-476 (see page 4 of this report for a discussion of this issue). This population can constitute up to 12% of total enrollment.
- Local school district option was offered in regard to testing students who are considered as Limited English Proficient. Based on 1991-92 school year data, this population can constitute up to 2.8% of total enrollment.
- Makeup tests were not given to students who were absent during the test days. Average daily absence in Oklahoma's public schools is approximately 5.5%.
- Student enrollment is reported on September 15th of each school year. These figures can decrease measurably for a number of reasons, especially at the high school grades. It is apparent that--beginning at 10th grade--*dropouts* may account for many of the school leavers.

Examples of this enrollment phenomenon are provided as follows: The Fall 1991 enrollment for Grade 10 was 40,096; the Fall 1992 enrollment for this same statewide class of students as 11th graders was 37,011--for a total loss of 3,085 students, or 7.7% of the class. The actual dropout rate reported for the 10th grade during the 1991-92 school year (i.e., the most recent data available) is 5.2%, or 2,076 students.

An illustration with less pronounced results is found in the comparison of Fall 1991 enrollment at Grade 7 (i.e., 44,792) with the Fall 1992 enrollment figures for this same class of students in 8th grade (i.e., 44,163). The decrease in enrollment of this class is 629 students, or 1.4%. No dropout data are available specifically for 7th grade.

We will not know how many school leavers are accounted for in the difference observed in Fall 1992 9th and 11th grade enrollment and number of students tested in the OSTP until the Fall 1993 enrollment and dropout figures are available. However, a certain percent of this difference can be attributable to students who are no longer enrolled in Oklahoma schools when the tests are administered.

The differences existing in enrollment figures as compared with number of students tested are indicated as follows:

| <u>Grade Level</u> | <u>Student Enrollment<br/>Fall, 1992*</u> | <u>Number of<br/>Students Tested**</u> | <u>% of Student<br/>Enrollment Tested***</u> |
|--------------------|-------------------------------------------|----------------------------------------|----------------------------------------------|
| 3                  | 48,350                                    | 42,639                                 | 88%                                          |
| 5                  | 48,760                                    | 43,410                                 | 89%                                          |
| 7                  | 46,537                                    | 41,730                                 | 90%                                          |
| 9                  | 45,278                                    | 38,550                                 | 85%                                          |
| 11                 | 37,011                                    | 30,651                                 | 83%                                          |

### C. Understanding the Data

#### 1. Norms and Their Interpretation

Oklahoma's group scores for each of the grade levels are reported in terms of the AVERAGE score for that particular group of students. These scores are converted to national norms (e.g., National Percentile Ranks, Stanines, Normal Curve Equivalents, and Median Grade Equivalents) to provide a comparison of Oklahoma's student performance levels with those of the national norm group.

The national norm group is a large group of students (e.g., 200,000 in each grade for the various levels of ITBS and TAP) who are selected based on scientific random sampling. The goal of such random sampling is to achieve grade level groupings which represent a cross-section of the United States in terms of their mixture of geographic areas, socioeconomic levels, ethnic groups, urban/rural locations, and other differences existing among school districts.

The norming (standardization) process involves the administration of appropriate levels of the tests to students at each grade level in the national

norm group. This group's average score on a given test at a particular grade level becomes the "norm" with which performance of individuals or groups of students in the same grades can be compared. (Example: the average score of students in the national norm group is represented by the 50th percentile rank, the 50th NCE, or a stanine of 5 on a particular test administered at a specific grade level. If Oklahoma students score a percentile rank of 55 on a particular test, our students are said to be performing above the national norm. Interpretation: our average student performed at a level equal to or better than 55% of the students who comprised the national norm group.)

## 2. Norm Scales Employed

Two kinds of norm scales were available for use: empirical (actual norms resulting from administration of the test to the national norm group in April and May of 1988) and interpolated norms for the week of testing (norms which have been statistically treated to estimate performance at times during the year other than when the national norm group took the tests). The use of interpolated norms for the week of March 23rd was chosen for the OSTP based on the following rationale:

- Empirical norms for the ITBS and TAP were established from administration of tests during March through June 1988. The "midpoint" of this empirical norm period is April 30th.
- Federal legislation regarding Chapter 1 testing and reporting beginning in 1989-90 stated that scores reported for these students must result from test administration that is (a) within two weeks either side of the midpoint of the empirical norm period (for the use of empirical norms); and (b) within six weeks either side of the midpoint of the empirical norm period (for the use of interpolated norms). The interpolated norms for March 23 were within the limitations set by the federal regulations and represented a "midpoint" in Oklahoma testing, based on the distribution of schools testing across the four available weeks.

## D. Presentation of the Data

Figure 1 (page 19) provides a summary of the ITBS and TAP scores in the major knowledge and skill areas of Reading, Language, Work-Study Skills, Mathematics, and the average of these areas (Basic Composite). Provided in addition are scores for Science, Social Studies, and the grand average of all areas tested--Total Complete Composite. The students' averages are expressed in Normal Curve Equivalent (NCE) scores. The NCE score scale is an equal-interval scale with a range of 1 to 99 and an average (or mean) of 50. The "national average" with which to compare Oklahoma students' scores is therefore 50.

Tables 5-9 (pages 22, 24, 26, 28, and 30) list the performance levels of the 1993 OSTP participants in each of the subjects and grade levels tested. Figures 2 through 6 (pages 23, 25, 27, 29, and 31, respectively) illustrate Oklahoma students' average scores (expressed in National Percentile Ranks) as compared with the national norm of the 50th percentile rank.

NOTE: The percentile rank scales pictured on the figures listed are irregularly shaped to represent the "clustering" of students' scores near the middle of the scale. That is, more of the scores occur in the middle range than occur at the extremes.

**FIGURE 1**  
**1993 ITBS and TAP Results for Grades 3, 5, 7, 9, and 11**  
**Expressed in Normal Curve Equivalent (NCE) Scores**

\* Average of Reading, Language, Work Study, and Mathematics Skills

\*\* Average of all subtests administered

\*\*\* N = number of students tested at each of the grades indicated.

The scores provided on Tables 5-9 are interpreted in the following manner, beginning from left to right at the top of the tables: (See the companion document *Interpretive Guide*, Appendix I, pages 4-8 for a more thorough explanation of these scores.)

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| N-CNT     | N-Count: Number of students tested                                                                                                                                                                                                                                                                                                                                                                                                                 |
| NP        | Number Possible: Total number of test items on each subtest.                                                                                                                                                                                                                                                                                                                                                                                       |
| RS        | Raw Score: Average number of test items answered correctly                                                                                                                                                                                                                                                                                                                                                                                         |
| GE        | Grade Equivalent: The grade level equivalent of average student performance, expressed in number of months of instruction; calculations are based on ten months of instruction per school year.                                                                                                                                                                                                                                                    |
| SS        | Standard Score: A score from an equal-interval scale that ranges from 10 through 290. This score measures student achievement growth from year to year.                                                                                                                                                                                                                                                                                            |
| NCE       | Normal Curve Equivalent: A score from an equal-interval scale that has an average of 50 and ranges from 1 to 99. This score is derived from the National Percentile Rank. A net difference of zero from pretest to posttest scores indicates "normal gain" for a student or group <u>comprising the same students</u> .                                                                                                                            |
| NPR-S     | National Percentile Rank and Stanine: The National Percentile Rank is not an equal-interval scale and indicates a student's or group's relative ranking compared with the average performance of the national norm group. The average score for this scale is 50, and the scale ranges from 1 to 99. The Stanine is an equal-interval scale which divides the Normal Curve into nine equal parts. The 5th Stanine is considered the average score. |
| SPR-S     | State Percentile Rank and Stanine: The State Percentile Rank represents the state "norm" and the scale of scores resulting from development of state norms. The State Stanine score represents the average score—based on the state norm—of the set of students tested at a specific grade level.                                                                                                                                                  |
| NPR Graph | The shaded area in the National Percentile Rank graph represents the range within which the "middle 50%" of the population is expected to score, based on national norms. The "X" represents the plot of the average Oklahoma score earned on each subtest and the total test areas. The "dashes" on either side                                                                                                                                   |

of the X's represent the range within which our students could be expected to score if they were administered the same tests within a few weeks of the March-April administration.

The lower portions of Tables 5-9 list the clusters of skills that were measured within each subtest and the higher order thinking skills measured. The following items are provided for each of these skill clusters:

|          |                                                                                                                                                                                                                                                           |
|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| N Items  | The total number of test items measured within a given skill cluster.                                                                                                                                                                                     |
| State %C | The percent of total items answered correctly by the average Oklahoma student.                                                                                                                                                                            |
| Nat'l %C | The percent of total items answered correctly by the average student in the national norm group.                                                                                                                                                          |
| % Low    | The percent of Oklahoma students scoring within the lowest quartile, or at and below the 25th National Percentile Rank.                                                                                                                                   |
| % AVG    | The percent of Oklahoma students scoring within the range from the 26th National Percentile Rank through the 75th National Percentile Rank (i.e., a numeral that we would compare with 50, or the "middle 50%" of the students, based on national norms). |
| % High   | The percent of Oklahoma students scoring within the range from the 76th National Percentile Rank through the 99th Percentile Rank (i.e., the highest quartile, based on the Normal Curve).                                                                |

Figure 6  
**TESTS OF ACHIEVEMENT AND PROFICIENCY**  
 Average Performance of Grade 11 Students  
 (National Percentile Ranks)  
 (Number Tested = 30,651)

Table 10 displays the percent of Oklahoma students earning each of the Stanine scores as compared with the percent expected, based on the theory of the Normal Curve. The Stanine (short for standard nine) scale consists of nine scores which range from 1 (low) through 9 (high). The mean (or average) of this scale is 5, and the standard deviation is 2. (Appendix H displays the Normal Curve and illustrates the relationship of the Stanine score to the other normative score scales utilized to report norm-referenced achievement test data.)

The stanine scale divides the Normal Curve into nine parts; therefore, each Stanine score represents a range of Raw Scores, Percentile Ranks, Normal Curve Equivalents, and other scores. With the exception of the lowest and highest Stanine scores, each is  $\frac{1}{2}$  Standard Deviation in width, with the middle score (5) being set at  $\frac{1}{4}$  standard deviation either side of the mean.

Table 10 illustrates the distribution of Oklahoma's scores at each grade level, compared with that expected based on a "normal distribution" (i.e., the Normal Curve). An analysis of these scores reveals that (1) fewer [than expected] Oklahoma students at each grade scored in the lowest Stanines of 1 through 3; (2) fewer than expected scored in Stanine 4 except at grades 7 and 11; (3) a greater number than expected scored in the range of Stanines 5 through 7; (4) a greater number than expected scored in the 8th Stanine in grades 3, 5, 7, and 9; and (5) a greater number than expected scored at the 9th Stanine in grades 5 and 11.

**Table 10**

**Comparison of Oklahoma Students' Performance in Each Stanine With That Expected,  
Based on the Normal Curve--1993 Results**

| 1                | 4%                             | 1                                                                                | 1       | 1       | 1       | 1        |

\*Percent of total scores expected to occur in each Stanine, based on normal distribution (i.e., the Normal Curve).

- Table 11 (page 34) illustrates the performance summary of OSTP participants for each grade and major subject area in terms of the percent of students scoring in (1) the lowest three stanines; (2) the middle three stanines; and (3) the highest three stanines on the percentile rank scale. These divisions of the percentile rank scale are categorized as *Low*, *Average*, and *High*, respectively, on score reports received by schools and by the state. Student's scores on each subject area subtest fit into one of the three categories, based on the total number of test items each was able to answer correctly. The categories used for this analysis--with the accompanying national norm bands--are provided as follows:

| <u>CATEGORY</u> | <u>EQUIVALENT<br/>STANINE GROUPINGS</u> | <u>% OF STUDENTS<br/>EXPECTED TO SCORE<br/>IN EACH CATEGORY</u> |
|-----------------|-----------------------------------------|-----------------------------------------------------------------|
| LOW             | Stanines 1, 2, and 3                    | 23%                                                             |
| AVERAGE         | Stanines 4, 5, and 6                    | 54%                                                             |
| HIGH            | Stanines 7, 8, and 9                    | 23%                                                             |

- Figures 7-11 (page 35-39) illustrates the performance summary of OSTP participants at each grade level in the Higher Order Thinking Skills. These skills require students to compare, contrast, synthesize, or evaluate knowledge; to demonstrate the ability to analyze their thinking processes or to derive the solution rule in order to answer the test item. Such skills are needed to achieve success in many of the courses for (a) high school graduation, (b) vocational-technical training, and (c) most of the trades and/or professions that students will pursue in life.

Students' scores were reported as fitting into one of three categories based on the number of Higher Order Thinking Skills items each was able to answer correctly. These categories are listed below. The accompanying national norm bands are given for each:

| <u>CATEGORY</u> | <u>EQUIVALENT<br/>PERCENTILE<br/>RANK GROUPINGS</u> | <u>% of STUDENTS<br/>EXPECTED TO SCORE<br/>IN EACH CATEGORY</u> |
|-----------------|-----------------------------------------------------|-----------------------------------------------------------------|
| LOW             | 1--25                                               | 25%                                                             |
| AVERAGE         | 26--75                                              | 50%                                                             |
| HIGH            | 76--99                                              | 25%                                                             |

- The Oklahoma State Department of Education, with the aid of statewide committees of teachers and school administrators, developed and validated the Suggested Learner Outcomes for Grades 1-12 (1983-84). These Suggested Learner Outcomes (SLO's) are learning objectives considered by Oklahoma educators as appropriate for students at the various grade levels.

Not all of the Oklahoma SLO's were measured by the ITBS and TAP due to the following conditions:

- the ITBS and TAP were not customized for use solely in Oklahoma; it is a standardized, norm-referenced tests series developed for use throughout the United States, and
- not all of the SLO's are measurable by a multiple-choice, group-administered test format (e.g., "oral reading" as a learner outcome is not measurable by a pencil-and-paper test).

To estimate student performance on the SLO's measured by the ITBS and TAP, the scores on test items which measured each SLO are combined. For each SLO measured by the test, a *percentage of items answered correctly* score indicates how well Oklahoma's students as a group performed on the skill(s) described by the SLO.

To determine how well Oklahoma students performed on all SLO's measured by a particular test (i.e., fifth grade mathematics), the individual SLO data are combined to yield an *average percent of all test items answered correctly* by the entire group of students who took the test. This score can be compared with the *class average score on a teacher-made test*. These scores are available on Oklahoma's reports to indicate both the state's average performance and that of the national norm group.

Tables 12 and 13 (pages 41-42) compare Oklahoma's average SLO scores with those of the national norm group for each subject area test administered. The data displayed on these tables indicate the number and percent of SLO's on which Oklahoma's average score was *equal to or better than* the national norm group's average score.

The purpose of Tables 12 and 13 is to display SLO score data over a two-year period for specific groups of Oklahoma students. The groups for which data are provided include those students who moved from Grades 3, 5, 7, and 9 to Grades 5, 7, 9, and 11 (a) from 1990 to 1992; and (b) from 1991 to 1993.

Progress is determined by the increase or decrease (over the two-year period) in percent of SLO's on which Oklahoma's students scored at a level *equal to or better than the national norm group*. Tables 12 and 13 display these data for the 1990 to 1992 and 1991 to 1993 groups, respectively, on the following basis: (a) individually by subject and grade; and (b) across all subjects in a given grade.

Table 12

Number (of Total Measured) and Percent of  
Oklahoma's Suggested Learner Outcomes on Which the State's Average Score was  
Equal to or Greater than the National Average Score

A Comparison of Grade by Subject Results in 1990 and 1992 on the Same Groups of Students

| Grade Level                        | Reading |            | Language Arts |            | Mathematics |            | Science |            | Social Studies |            | All Subjects Combined |            |

- Oklahoma Law defines the OSTP's purpose as an education program improvement effort. To fulfill this purpose, educators are encouraged to analyze the OSTP results to determine students' skill strengths and needs, and apply these findings--in conjunction with other relevant factors--to program improvement.
- During inservice sessions, test objectives are examined to determine the degree to which these outcomes are appropriate for students in each local school. Teachers are encouraged to compare the test objectives with their own local district and building learner expectations and to focus on teaching the skills needed by students, rather than teaching only to the test objectives.

The Suggested Learner Outcome (SLO) Score Reports are provided at the individual student, class, building, and district levels to aid in fulfilling program improvement needs. Since the SLO's were developed by Oklahoma teachers, the skills represented by these outcomes are considered appropriate for instructional focus.

The SLO Reports--by design--yield performance level scores of 0-100%, based on the percent of items answered correctly out of the total number of items representing the measure of a given learner outcome. This scoring method provides a scale identical to that used in grading students' daily work and teacher-made tests. (See Appendix A for the Suggested Learner Outcome Report: State Level Results, 1993.)

Item data were established on all test items during Riverside Publishing Company's field-test and norming efforts. To obtain comparisons of our students' performance with that of the national norm group on the SLO's, the norm-groups' responses to items keyed as measuring Oklahoma's SLO's are pooled, and percentages of correct responses are calculated. These results appear on Oklahoma's SLO Reports at all levels to provide appropriate comparisons.

While Oklahoma's performance compares favorably with the national average, there are nevertheless many SLO's on which student performance levels indicate a need for review, reteaching, and/or remediation. School personnel are encouraged to determine the score ranges that fit each level of instruction needed, and analyze their SLO Report results to determine the skills on which to focus the various teaching methods.

An example of SLO score ranges and the instructional methods needed within each is offered as follows:

|              |                                                                                                                        |
|--------------|------------------------------------------------------------------------------------------------------------------------|
| 75.0%--100%  | Review the skill periodically to maintain student proficiency.                                                         |
| 50.0%--74.9% | Reteach the skill and provide practice as needed through a variety of activities until student proficiency is reached. |
| 00.0%--49.9% | Reteach often; provide intense daily practice through a variety of activities until student proficiency is reached.    |

- Table 14 (page 45) provides a summary of the 1993 SLO data analysis. Displayed on Table 14 are percentages of the total Suggested Learner Outcomes on which the average score was within the ranges of the 75.0%-100%, 50.0-74.9%, or 0.0-49.9% proficiency levels in each of the grades and subject/skill areas tested.

**Table 14**

## E. Summary and Interpretation of the Data

The 1993 achievement test performance of Oklahoma students\* indicates the following:

- ITBS and TAP National Percentile Rank (NPR) scores earned by Oklahoma's students enrolled in Grades 3, 5, and 11 in 1992-93 were generally higher than those earned by students enrolled in those grades during the 1991-92 school year.
- NPR Total Composite Scores earned by Oklahoma's students enrolled in Grade 7 in 1991-92 and 1992-93 remained constant at 60. However, the more sensitive three-digit Normal Curve Equivalent (NCE) score indicates 55.3 for the 1992 group, and 55.5 for the 1993 group, for a change in score of + 0.2.
- The Total Composite NPR score of students enrolled in Grade 9 (i.e., the state average score for this grade) remained constant at 61 during 1991, 1992, and 1993. This score is equivalent to an NCE score of 55.8.
- The major skill strengths at the grade levels tested appear to be the following:

| <u>Grade 3</u> | <u>Grade 5</u> | <u>Grade 7</u> | <u>Grade 9</u> | <u>Grade 11</u>    |
|----------------|----------------|----------------|----------------|--------------------|
| Language       | Science        | Science        | Science        | Science            |
| Science        | Language       | Work/Study     | Social Studies | Social Studies     |
| Mathematics    | Reading        | Reading        | Reading        | Written Expression |
|                | Comprehension  | Comprehension  | Comprehension  |                    |

- In general, greater percentages of students tested in 1993 scored in the highest quartile (i.e., the range of scores representing Percentile Ranks 76 to 99) on *Higher Order Thinking Skills* as compared with their peers tested in 1992.
- In general, greater percentages of students tested in 1993--as compared with students tested in 1992--scored above the national average on those Oklahoma Suggested Learner Outcomes measured by the ITBS and TAP.

It is believed that the OSTP tests administered in late March and early April 1993 have revealed valuable information regarding student achievement in Oklahoma. It is further believed that these data--viewed from the standpoint of the limitations ascribed to use of standardized, norm-referenced achievement tests--are being utilized appropriately at the local school and district levels to improve instructional programs.

\* The national average score for both score scales utilized in this summary (i.e., National Percentile Rank and Normal Curve Equivalent) is 50.

Grade 9 Norms SPRING  
Level 15 Form J  
Sheet 1 of 17

NUMBER OF ITEMS  
NATIONAL AVERAGE  
STATE AVERAGE

#### LEARNER OUTCOMES

##### LANGUAGE ARTS

N

35628

##### LITERATURE

L9.1 Recognize the specific differences between fiction and nonfiction.

1 RS .6  
XC 64 .7  
71

L9.5 Identify the distinctions between fact & fiction, opinion & inference in literature and media.

1 RS .6  
XC 64 .7  
71

##### GRAMMAR

GR9.1 Define and use the eight parts of speech correctly.

15 RS 9.9  
XC 66 10.6  
70

GR9.2 Review classification of sentences according to function or type.

2 RS 1.4  
XC 70 1.5  
76

GR9.3 Classify sentences according to structure, including simple, compound, compound/complex, and complex.

1 RS .6  
XC 63 .7  
69

GR9.4 Recognize the words used to introduce subordinate clauses.

1 RS .6  
XC 63 .7  
69

GR9.5 Use basic rules of capitalization and punctuation with emphasis on the appropriate use of the comma.

13 RS 7.9  
XC 61 8.6  
66

GR9.6 Follow standard rules of usage, with emphasis upon subject-verb and pronoun-antecedent agreement.

15 RS 9.9  
XC 66 10.6  
70

##### SPELLING AND VOCABULARY

SV 1 Apply spelling skills in all assigned work.

6 RS 4.0  
XC 66 4.2  
70

SV 2 Continue to proofread written work competently and edit for correctness in spelling.

6 RS 4.0  
XC 66 4.2  
70

SV 3 Develop competency in vocabulary recognition and use by learning root words, prefixes and suffixes.

5 RS 2.5  
XC 49 2.5  
50

#### LEARNER OUTCOMES

##### MATHEMATICS

N

35628

##### GENERAL MATHEMATICS

GM.1 Round numbers.

1 RS .8  
XC 79 .8  
76

GM.2 Identify and define math terminology used in the basic operations.

3 RS 1.4  
XC 45 1.4  
45

GM.3 Identify the place value of each digit in a given numeral and write numerals using standard, expanded, and scientific notation.

2 RS 1.2  
XC 59 1.1  
57

GM.5 Use order of operations to solve simple numerical expressions.

1 RS .7  
XC 66 .7  
71

GM.6 Add, subtract, multiply, & divide whole numbers, fractions, & decimals.

7 RS 5.4  
XC 77 5.3  
76

GM.7 Solve word problems involving whole numbers, decimals, and fractions.

10 RS 3.5  
XC 35 3.3  
33

GM.8 Compare whole numbers, decimals, and fractions using the symbols <, >, and =.

1 RS .7  
XC 67 .7  
66

GM.15 Recognize and classify polygons.

2 RS .8  
XC 42 .8  
39

GM.16 Identify parts of a circle & calculate the circumference and area of a circle.

1 RS .3  
XC 26 .3  
28

GM.17 Identify the characteristics of various quadrilaterals and calculate the area and perimeter of a given quadrilateral.

3 RS .8  
XC 25 .6  
21

GM.18 Calculate the volume of a simple solid.

1 RS .4  
XC 40 .3  
33

GM.20 Use the English and metric systems of measurement.

2 RS .6  
XC 28 .5  
24

GM.21 Demonstrate an understanding of time.

1 RS .3  
XC 30 .3  
30

|                                                                              | N                 | 27711     |
|------------------------------------------------------------------------------|-------------------|-----------|
| ALI.12 Solve linear inequalities in one variable with integral coefficients. | 2 RS .8<br>XC 42  | .7<br>37  |
| ALI.14 Solve equations containing rational expressions.                      | 3 RS 1.0<br>XC 60 | 1.9<br>63 |
| ALI.18 Solve problems using algebraic concepts.                              | 2 RS .6<br>XC 32  | .5<br>25  |

### GEOMETRY

|                                                                                                                         |                    |           |
|-------------------------------------------------------------------------------------------------------------------------|--------------------|-----------|
| G.1 Demonstrate a knowledge of undefined terms, basic definitions, and measurement.                                     | 11 RS 4.3<br>XC 39 | 4.0<br>37 |
| G.2 Demonstrate a knowledge of relationships and apply theorems about special pairs of angles.                          | 3 RS 1.6<br>XC 52  | 1.5<br>50 |
| G.3 Demonstrate a knowledge of conditional statements.                                                                  | 1 RS .2<br>XC 24   | .3<br>26  |
| G.13 Identify relationships in right triangles.                                                                         | 1 RS .1<br>XC 12   | .2<br>16  |
| G.17 Demonstrate a knowledge of perimeter and area of special polygonal regions.                                        | 4 RS 1.1<br>XC 27  | 1.0<br>25 |
| G.18 Find the circumference and area of a circular region and compute arc lengths and the area of a sector of a circle. | 2 RS .6<br>XC 32   | .6<br>28  |
| G.20 Use the slope, distance, and mid-point formula to solve problems.                                                  | 1 RS .2<br>XC 24   | .3<br>26  |

### ALGEBRA II

|                                                                                 |                     |            |
|---------------------------------------------------------------------------------|---------------------|------------|
| ALII.1 Demonstrate a knowledge of the basic concepts of the real number system. | 48 RS 22.1<br>XC 46 | 21.0<br>44 |
| ALII.2 Solve first degree equations and inequalities in one variable.           | 2 RS 1.1<br>XC 57   | 1.2<br>62  |

### TRIGONOMETRY

|                                    |                  |          |
|------------------------------------|------------------|----------|
| T.6 Use degree and radian measure. | 1 RS .4<br>XC 42 | .4<br>43 |
|------------------------------------|------------------|----------|

### LEARNER OUTCOMES

|                                                                                                                            | N                 | 27711     |
|----------------------------------------------------------------------------------------------------------------------------|-------------------|-----------|
| MA.7 Demonstrate the ability to identify and solve for the nth term in both arithmetic and geometric sequences and series. | 1 RS .5<br>XC 45  | .4<br>42  |
| MA.18 Demonstrate a knowledge of exponents and logarithms.                                                                 | 3 RS 1.4<br>XC 45 | 1.2<br>41 |

### READING

|                                                                           |                     |            |
|---------------------------------------------------------------------------|---------------------|------------|
| 11.2 Become competent in the methods and mechanics of word meaning study. | 8 RS 4.6<br>XC 58   | 4.7<br>59  |
| 11.3 Recognize unknown vocabulary words by using context clues.           | 8 RS 4.6<br>XC 58   | 4.7<br>59  |
| 11.6 Improve literal comprehension of reading material.                   | 32 RS 19.8<br>XC 62 | 19.8<br>62 |
| 11.7 Independently interpret various types of reading material.           | 19 RS 11.6<br>XC 61 | 11.5<br>61 |
| 11.8 Learn to evaluate and critique reading material.                     | 5 RS 3.7<br>XC 73   | 3.6<br>73  |
| 11.10 Locate and use information from various sources.                    | 70 RS 44.1<br>XC 63 | 46.5<br>66 |
| 11.17 Use functional material independently.                              | 7 RS 4.3<br>XC 62   | 4.6<br>66  |

### SCIENCE

#### PHYSICAL SCIENCE

|                                                                               |                   |           |
|-------------------------------------------------------------------------------|-------------------|-----------|
| GSP.1 Gain knowledge of matter as related to its phases and properties.       | 9 RS 4.3<br>XC 48 | 4.6<br>53 |
| GSP.2 Gain knowledge of various physical models.                              | 3 RS 1.8<br>XC 60 | 1.9<br>65 |
| GSP.3 Gain knowledge of the periodic table and information contained therein. | 3 RS .9<br>XC 31  | 1.1<br>36 |
| GSP.5 Gain knowledge of energy & investigate its forms and changes.           | 6 RS 3.1<br>XC 51 | 3.3<br>55 |
| GSP.7 Gain knowledge of laws of motion and their related forces.              | 2 RS 1.3<br>XC 45 | 1.4<br>60 |

N = Not Important at All

**Appendix C**  
**List of Averages--Region Summary,**  
**State of Oklahoma, Grade 3 (1993)**

## GRADE 3

**NOTE:** Appendix C of this report offers district level test results. Deleted from these reports were scores from school districts in which five or fewer students were tested at any given grade level. This was done to protect the privacy of individual students in those school districts.
